

## **Smart-Locks Lead Growing Trend of Home Management via Smartphones at CEDIA Expo 2014**

***OKIDOKEYS Smart Locks and Smart Keys provide convenience, security and peace of mind with Android phones or iOS including the latest iPhone 6***

**Denver (CEDIA) - September 10, 2014** - Following the emerging trend of products that help people manage their home via smartphone, OKIDOKEYS presents its Smart-Lock system at the CEDIA Expo 2014. OKIDOKEYS allow users to manage access to their home safely and easily via Bluetooth 4.0 (BLE)-enabled iOS or Android phones. With the free OKIDOKEYS app, you can lock and unlock doors, share keys with family, friends and renting guests, and monitor access to stay in control of your home at anytime from anywhere.

“Metal keys have been around for centuries, but they’re not best suited to our busy lifestyle, especially in the contemporary sharing economy. People want a safer solution than to leaving a key under the doormat or a rock,” said Pascal Metivier, founder and CEO of OKIDOKEYS. “OKIDOKEYS Smart Locks and keys are simple and safe to use leveraging a 256bit AES banking /military grade cryptographic technology.”

The OKIDOKEYS Smart-Lock is made to enhance your existing deadbolt. It self-installs easily to the interior of your front door without drilling or wiring. Once the Smart-Lock is installed, you can lock and unlock your doors by using your smartphone, thanks to the free OKIDOKEYS app available for iOS and Android. Select from six opening rules to fit your needs, including a hands-free mode. In addition, your metal keys continue to operate as before.

The app and web portal allow you to create, share and revoke access for family, friends and third parties such as babysitters and trusted service people, and receive notifications when doors are being operated. Keys may be created with date and time limits. OKIDOKEYS are the perfect solution for rental units and homesharing, giving property owners affordable peace of mind.

By pairing the Smart-Lock with the optional wireless OKIDOKEYS Smart Reader, you and your guests will enjoy the freedom to lock and unlock doors using a variety of key options: smartphones, Bluetooth 4.0 Smartphone, NFC enabled Smartphones (like the Apple iPhone 6 or the Samsung S series) cellphones, and smart RFID tags. You can even keep a credit-card-sized contactless RFID card in your wallet in case your cell phone battery runs out.
